

**GREATEST SKIN DIVING
SAFETY-DEVELOPMENT
IN YEARS...**

**DESCO'S
Sensational New
"SAF-T-EYE"**

**AIR RESERVE
WARNING LIGHT and
TANK PRESSURE INDICATOR
in the ALL-NEW DESCO
PROFESSIONAL-TYPE DIVING MASK**

*Just wait for the light...
then surface in safety!*

DESCO now offers new safety advantages *never before available* to sport and professional skin divers. Now "SAF-T-EYE" eliminates all concern for insufficient air reserve. No watches and pressure gauges to check, no breathing restriction to wait for, only to find that the reserve valve has not been reset. Banish all cares and find new freedom and pleasure in your underwater world.

The "SAF-T-EYE" is available either built into the all-new DESCO Full-Face Diving Mask or for converting your present equipment in a few simple steps.

The new DESCO Professional-type Mask provides the easiest breathing ever in any type of SCUBA equipment, combined with an easy comfortable fit, wide vision with anti-fog vent. It's strong, durable, built to professional standards with full face protection against cold and foul water. Equipped with five, wide, fully adjustable, quick-release straps. Can also be used with a low-pressure air supply through surface hose connection.

DESCO Emergency Valve — A safety bonus *only provided by DESCO*. Should your demand regulator become frozen or damaged, a full flow of air is available with a twist of the wrist — also invaluable in disaster work, in smoke or gas.

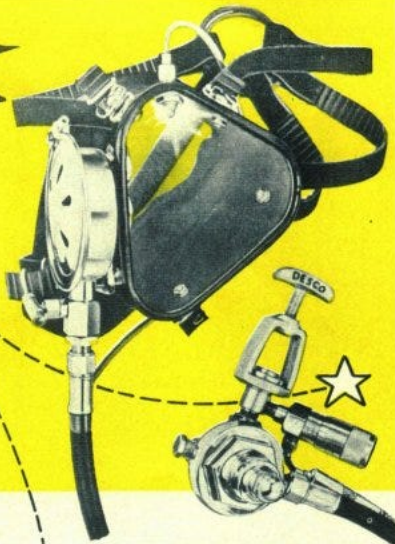

DESCO "SAF-T-EYE" is a simple, quick, always available means of checking your tank pressure before each dive. No gauges to buy. And, most important, a bright warning light *inside your mask* tells you that your air pressure has reached the preset limit. **NO LONGER ARE YOU BOUND TO THE 300 psi RESERVE LIMIT.** Select any pressure that gives you SAFETY!
