MK 7 FIRST STAGE 10-107-000

Revison S Date 9/94 Annual Repair Parts Kit #10-107-041

Technical Information:

Item #2 note: The 3/8 and 7/16 yoke screws are for older configuration MK7 bodies which are limited to 2475 psi service.

Special Engineering Notes:

Item #16, 01-050-147 o-ring can be installed with the aid of a 3/8" nut driver. To properly locate this o-ring, lightly lubricate it, then place it into the body and chase it with the end of the nut driver to fully seat it. Apply a light downward pressure using a rocking action. Remove the nut driver and inspect the o-ring position. It should be located completely into the recess.

Maximum of 3 washers #01-060-101 may be used to adjust intermediate pressure to specified limits.

Flow through piston designs will under some conditions make a whistling noise during flow. To alleviate , replace Item #15 HP seat, and heavily lubricate Item #25, 01-050-137 o-ring.

Legend (prices subject to change without notice)

- Not Shown
- O'Ring Replace Annually
- O Optional Item
- Annual Replacement
- ▲ Limited Warranty `[] Torque in Inch Pounds
